Subject: Husky 891 Use

Dear Mr. O'Connell

Thank you for your inquiry regarding the use of Husky 891.

In response to your questions regarding the use of this product for disinfection of veterinary or animal housing areas, the label direction is very specific that animals must be removed from the area to be cleaned and disinfected prior to application of our product.

We field many questions regarding use of our products and our standard procedure is to refer the end user to label directions, especially in the case of disinfectants which are regulated and label wording reviewed by the U.S. EPA.

As misuse of these products are considered a violation of FIFRA, we again, as standard procedure, do not recommend off-label direction or applications.

With respect to the letter forwarded from the end-user recounting a conversation with us, we do not recall any specific comments made regarding using the product in the presence of pets or that the animals could safely ingest the material. Since we have no control over how the product is actually diluted, we are very reluctant to make any statements dealing with safety of use solutions. Normally,

we do try to give the end-user a sense of relative safety of our product via comparison with similar applications. This would not, however, include statements for which no supporting data can be referenced.

I hope this information is responsive to your needs and again thank you for your concern regarding the safe use of our product. Irresponsible use of chemistry harms us all.

Best regards,

John Wiegand

V.P. Research and Development
